PROSPER AMUTAH

Software Engineer | Quality Assurance Engineer

contact@prosperamutah.online +2349077989776 Nigeria https://linkedin.com/in/prosper-amutah-667530241

SUMMARY

Software Engineer and Quality Assurance Engineer with experience designing, developing, and testing web and mobile applications using Flutter, React, Laravel, PostgreSQL, MySQL, TypeScript, and Python. Designed and built a University Academic Management System after stakeholder interviews and requirements gathering, providing secure student authentication, administrative workflows, enrollment, and academic result management. Works with distributed engineering teams across multiple time zones, collaborates with technical and non-technical stakeholders, builds API endpoints for automating business replies to customers, and performs manual testing and defect analysis.

EXPERIENCE

QA tester

2025-02 — 2026-01

ihealth wellness foundation inc. · New york, united states

- Designed and executed comprehensive manual test plans and cases for web and mobile apps, covering functional, regression, integration, and UAT testing.
- Detected and documented critical defects with clear reproduction steps, improving developer turnaround and reducing release delays.
- Maintained detailed test documentation that improved team efficiency and ensured consistent QA processes across releases.
- Collaborated with cross-functional teams across multiple time zones, aligning QA milestones with global release schedules.

Software Developer

2023-06 — 2024-10

Berge Technology Hub · Umuahia, Abia state, Nigeria

- Built and deployed responsive features for an e-commerce platform, improving checkout speed and user engagement by 30%.
- Delivered cross-browser, mobile-optimized UI using Bootstrap, Tailwind CSS, and TypeScript.
- Integrated backend services in Laravel and MySQL, enhancing system performance and reliability.

- Actively contributed to Git-based code reviews, improving code quality and team productivity.

Lecturer & Software Engineering Department Coordinator

2025-12 — 2026-10

Havilla university Nde-ikom, cross river state · Cross river, Nigeria

- Taught undergraduate courses in Computer Science, Software Engineering, and Cyber Security.
- Prepared lecture materials, practical exercises, tests, and examinations.
- Coordinated activities within the Software Engineering Department, supporting curriculum development, academic planning, and student learning.
- Participated in technology discussions focused on improving academic and administrative processes.
- Guided students through software development concepts and programming practical sessions.

QA Engineer and API Tester

2024-12 — Present

Nu3careplus LTD · Remote

- Designing and executing test cases for software applications and APIs.
- Performing API testing to verify functionality, responses, and expected behavior.
- Identifying, documenting, and reporting software defects while conducting functional and regression testing.
- Collaborating with development teams to investigate issues and support the overall quality assurance process.

EDUCATION

BSc in Computer Science

2019-12 — 2024-10

Michael Okpara University of Agriculture Umudike, Abia state, Nigeria.

GPA: 3.92

TECHNICAL SKILLS

Python · Us based experience · WebSocket connections · role-based UI rendering · Fintech or payments experience · React · Node.js · Typescript · Docker · Postgrelsql · Mysql · Next.js · flutter · Dart · mobile app development · AI

SOFT SKILLS

Leadership · Clear Communication · Problem Solving · Cross Team collaboration

LANGUAGES

English — Expert

PROJECTS

JobProfi

Laravel, PHP, MySQL, Tailwind CSS, JavaScript, AI.

- Developed a SaaS platform for job seekers that enabled tracking applications, managing resumes, an AI career coach, interview preparation questions, job analysis, cover-letter cold-email assistance, and scheduling follow-ups.
- Implemented secure user authentication and role-based access control with Laravel.
- Built a resume and cover-letter builder that stored data in JSON, provided live previews, and exported PDFs with one click; it was used by more than 70 users.
- Integrated an AI job analyzer to compare user qualifications with role requirements, added automated email notifications that increased follow-up engagement by 35 %, connected Nigerian payment gateways Flutterwave and Paystack, and developed the Jobprofi mobile app using Flutter.

https://usejobprofi.com

University Academic Management System (UAMS)

React • Laravel • PostgreSQL • Docker • TypeScript Tailwind CSS

- Conducted stakeholder interviews and surveys with more than 100 students and university staff to gather functional requirements.
- Designed and developed a working prototype of a University Academic Management System.
- Implemented secure student authentication using matriculation numbers.
- Developed student enrollment, administrative dashboards, result management, and student self-service modules.
- Built administrative functionality for onboarding students, uploading results, editing results, and managing academic records.
- Demonstrated the system to university management using institutional data during workflow evaluation.

Voice Of The Youths (VOTY)

TypeScript · Node.js · REST API design · PostgreSQL · Supabase (Auth, Storage, RLS) · Next.js API Routes · SMS gateway integration · Rate limiting · Schema migrations

- An educational content platform for youths and teens. Members subscribe to access curated educational video content, answer trivia questions drawn from what they've watched, and participate in voting. A separate admin console handles content publishing, trivia authoring, and subscriber

management.

- Designed and shipped 34 REST endpoints covering authentication, subscription lifecycle, media upload, playback tracking, trivia delivery, and the admin console.
- Engineered phone-based OTP authentication integrated with a Nigerian carrier SMS gateway, enforcing 10-minute code expiry and attempt-capped verification to block brute-force and enumeration.
- Implemented subscription billing state across airtime and card payment methods, with plan periods, activation/cancellation flows, and administrative overrides backed by a normalized subscription history table.
- Modeled the relational schema across 18 versioned migrations, applying row-level security policies to isolate per-user data including viewing progress, votes, and profiles.
- Hardened the API surface with a sliding-window rate limiter (5 OTP requests/min, 10 verification attempts/5 min) emitting standard X-RateLimit-* headers, plus input validation at every trust boundary.
- Built resumable video playback using idempotent upserts on a composite key, auto-completing sessions at 90% watched and powering the member progress dashboard.
- Delivered the trivia subsystem — category-filtered question delivery, per-video question mapping, and admin authoring endpoints.

CERTIFICATIONS

- **Datacom Software Development Job Simulation on Forage - September 2025**
  Completed a simulation focussed on how the software development team at Datacom approaches their work. Reviewed a web application and planned for future improvements. Identified the root cause of bugs and implemented a fix to improve the application
- **Wells Fargo Software Engineering Job Simulation on Forage - September 2025**
  Understood relevant requirements for building a system to manage financial portfolios. Figured out what data the system needed to keep track of. Drafted a visual representation of the data as an entity relationship diagram (ERD). Used the IntelliJ developer application to implement the ERD and published it to GitHub.

VOLUNTEER WORK

- Collaborated with international teams across multiple time zones.
- Contributed to software quality assurance activities.
- Supported software delivery through structured testing and documentation.
